EDUCATION

Mahinda College Galle (2008 -2021)

- GCE Ordinary Level – Completed 2018
- GCE Advanced Level – Attempted 2022

National Institute of Business Management (NIBM) 2023 - Present

- BSc (Hons) Computer Science with Software Engineering (Coventry University) - Present
- Diploma in Software Engineering (Complete)
- Higher National Diploma Software Engineering (Complete)

SKILLS

Technical skills

- Java | Python
- PHP & Laravel
- Node.js | Spring Boot
- HTML, CSS, JavaScript
- My SQL, Oracle, MS SQL ,Mongo DB
- C# | .NET Framework
- Power BI | Postman
- IntelliJ | visual studio code | XAMPP

Professional Skills

- Team Work
- Leadership
- Problem Solving
- Critical Thinking
- Adaptability and Quickly learn
- Time Management

PROFILE

Software Engineering undergraduate at NIBM with a strong foundation in programming, software development, database management, and application design. Skilled in problem solving, logical thinking, and collaborating effectively in diverse environments. Eager to apply technical knowledge to real world projects and continuously enhance skills in modern software technologies.

EXPERIENCE

Intern Software Developer – Bank of Ceylon (BOC) | Oct 2025 – Jan 2026

- Developed and maintained web based applications using PHP (Laravel), Node.js, WordPress, MySQL, and CodeIgniter.
- Assisted in backend Implementation database integration, and frontend implementation with AdminLTE 4.
- Collaborated with the team to deliver functional and user friendly features for internal application

ACADEMIC PROJECTS

ORETA Shop Management System (Web Application - 2024)

- Acted as the Team Project Leader in delivering a web-based shop management system for ORETA UPVC (Pvt) Ltd using **PHP, MySQL, HTML, CSS** and **JavaScript**. Led the implementation of key modules including inventory, sales, delivery, supplier, customer, purchase, and employee management. Designed and managed the MySQL database to ensure efficient data storage and data integrity, while contributing to UI/UX design using **Figma** and system documentation using **Draw.io**

Car Rental Platform (Microservices Application -2025)

- Implemented Microservices on a car rental platform using **Spring Boot, REST APIs, Spring Cloud, and MySQL**. Developed and integrated microservices for Users, Cars, Bookings, and Payments, implementing core functionalities including user authentication, car search and filtering, booking management, and secure payment processing. Designed **REST endpoints** and tested APIs with **Postman**, while contributing to the system's microservices architecture, API gateway integration, and planning future enhancements such as email notifications and OAuth2 security.

Academix Tuition Class Mobile App (Mobile Application -2025)

- Developed a mobile application for academic administration using **Android Studio, Java, SQLite**, and QR Code Scanner API. Designed role-based dashboards for Admins, Teachers, and Students, implemented a QR code based attendance system, and built features for student enrollment, course and result management, assignment submissions, and real-time notifications. Integrated an SQLite database to manage records, courses, attendance, and performance, and created intuitive mobile interfaces, including a campus map, to enhance the student experience.

LANGUAGES

- English – Fluent
- Sinhala – Native

ACTIVITIES

- Computer Society, NIBM – Member (2024 – Present)
- Junior Debating Team, Mahinda College, Galle – Former Member (2017)

Smart Fire-Fighting Robot – IoT & Autonomous System (2025)

- Built an IoT based autonomous fire-fighting robot using **NodeMCU, Firebase**, Implemented flame and smoke detection using IR flame and MQ2 gas sensors, autonomous navigation with IR obstacle sensors, and water spraying via a servo controlled pump. Designed a Firebase-powered mobile app for remote control, real-time status monitoring, and manual override. Improved operational safety and response efficiency through automation and real-time monitoring.

UrbanFood – Hybrid Database E-Commerce Platform (2025)

- Worked as a Database Developer on a team project using **Oracle (PL/SQL), MongoDB, Java, and React**. Designed a hybrid database system integrating Oracle for structured data and MongoDB for reviews and feedback. Implemented stored procedures, triggers, and functions for supplier, product, order, and payment management, including audit trails, inventory tracking, and delivery assignment logic to ensure data integrity and real-time updates. Integrated backend services with a React frontend to deliver a seamless farm-to-consumer e-commerce experience supporting orders, payments, and deliveries.

Hotel Reservation System – Desktop Application (2023)

- Programmed a desktop-based hotel reservation system using **C# and .NET Framework** with **SQL Server**. Implemented core features including room booking, reservation approval, and booking report generation. Designed and integrated a SQL Server relational database to manage reservations, customers, and room availability. Created Windows Forms interfaces for administrators and staff to enable efficient booking management and seamless report viewing.

SafeZone – Women’s Safety Platform (2nd Year Final Project) 2025

- Developed an IoT-powered mobile application to enhance women’s safety using Android Studio (Java), ESP32, and Firebase Realtime Database. Implemented SOS alerts via app and wearable device, real time GPS tracking, repeated notifications to emergency contacts, and safe zone identification using Google Maps API. Designed features for proof collection (audio/video) and user feedback, ensuring rapid emergency response and improved user security.

Route Optimization and Passenger Boarding Tool
(Mobile Application) 2025

- Worked as a Team Project Member to design and implement a mobile application for airline staff using Android Studio and Java. Implemented Dijkstra’s Algorithm to calculate the shortest and most cost effective flight routes, and built a priority boarding system using Max Heap and FIFO Queue to ensure fairness while prioritizing business class and special assistance passengers. Developed a user friendly interface to display route comparisons, boarding lists, and dynamic operational updates, improving efficiency by reducing delays, minimizing costs, and streamlining passenger boarding management.
