<https://github.com/Ravindurrl>

A dedicated Software Engineering undergraduate at NIBM with a strong passion for problem-solving and logical thinking. Skilled in software development with a solid foundation in programming, databases, and application design. Known for effective communication, adaptability, and teamwork, thriving in collaborative environments. Actively pursuing continuous learning and eager to contribute to innovative, real-world projects that create meaningful impact in the tech industry.

EDUCATION

NIBM | Colombo 7 (2023 - Present)

2023 - 2027

Bsc(Hons) Computing specializing in Software Engineering

2023 - 2024

Pending Diploma in Software Engineering (GPA - 3.69)

2024 - Present

Higher National Diploma in Software Engineering (Current GPA - 4.00)

Mahinda College - Galle

GCE Ordinary Level – Completed 2018

GCE Advanced Level – Attempted 2022

PROJECTS & EXPERIENCES

ORETA Shop Management System - Web Application

- **Role:** Team Project Leader
- **Technologies:** PHP, MySQL, HTML, CSS, JavaScript, XAMPP, Figma, Draw.io
- **Responsibilities & Contributions:**
 - Led a team in developing a web-based shop management system for ORETA UPVC (Pvt) Ltd.
 - Oversaw design and implementation of key modules: inventory, sales, delivery, supplier, customer, purchase, and employee management.
 - Coordinated database design in MySQL, ensuring data integrity and real-time synchronization.
 - Guided UI/UX design using Figma and managed project documentation with MS Project & Word.
 - Ensured system met requirements for security, role-based access control, and performance optimization.

Go-Rental -Car Rental Platform

- **Role:** Team Member – Microservices Developer
- **Technologies:** Spring Boot, REST APIs, Spring Cloud, MySQL, Postman
- **Responsibilities & Contributions:**
 - Developed and integrated microservices for Users, Cars, Bookings, and Payments, ensuring independent deployment and REST-based communication.
 - Implemented core functionalities: user authentication, car search & filtering, booking management, and secure payment handling.
 - Designed REST endpoints and tested APIs using Postman to validate CRUD and query operations.
 - Contributed to designing the system's microservices architecture and API gateway integration.
 - Collaborated with team members to plan future enhancements such as email notifications, OAuth2 security.

UrbanFood – Hybrid Database E-Commerce Platform

- **Role:** Database Developer – Team Project
- **Technologies:** Oracle (PL/SQL), MongoDB, Java, React
- **Responsibilities & Contributions:**
 - Designed a hybrid database system integrating Oracle (for structured data) and MongoDB (for reviews & feedback).
 - Implemented stored procedures, triggers, and functions for supplier, product, order, and payment management.
 - Developed audit trails, inventory tracking, and delivery assignment logic to ensure data integrity and real-time updates.
 - Integrated backend services with React frontend to provide a seamless e-commerce experience.
 - Collaborated with the team to deliver an end-to-end farm-to-consumer marketplace supporting orders, payments, and deliveries.

Hotel Reservation System

- **Role:** Personal Project
- **Technologies:** C#, .NET Framework, SQL Server Management Studio
- **Responsibilities & Contributions:**
 - Developed a desktop-based hotel reservation system using C# and .NET Framework.
 - Implemented core features: room booking, reservation approval, and booking report generation.
 - Designed and connected a SQL Server relational database to manage reservations, customers, and room availability.
 - Created Windows Forms interfaces for administrators and staff, enabling smooth booking management and report viewing.

Route Optimization and Passenger Boarding Tool

- **Role:** Team Project Member
- **Technologies:** Android Studio, Java, Data Structures & Algorithms
- **Responsibilities & Contributions**
 - Designed and developed a mobile application for airline staff to optimize routes and manage passenger boarding.
 - Implemented Dijkstra's Algorithm to calculate shortest and cheapest flight paths between airports.
 - Built a priority boarding system using Max Heap + FIFO Queue, ensuring fairness while prioritizing business class and special assistance passengers.
 - Created a user-friendly mobile interface to display route comparisons, boarding lists, and dynamic updates during operations.
 - Improved operational efficiency by reducing delays, minimizing costs, and ensuring smooth boarding management.

Academix Tuition Class Mobile app

Role: Team Project

Technologies: Android Studio, Java, SQLite, QR Code Scanner API

Responsibilities & Contributions:

- Developed Academix, a mobile application for digitizing and streamlining academic administration.
 - Designed role-specific dashboards for Admins, Teachers, and Students with dedicated functionalities.
 - Implemented QR code-based attendance system for efficient and accurate record-keeping.
 - Built features for student enrollment, teacher/course management, result entry, and assignment submissions.
 - Integrated SQLite database to store student records, courses, attendance, and performance data.
 - Enabled real-time notifications and communication for students and teachers.
 - Designed intuitive mobile interfaces, including a campus map, to improve the student experience.
-

TECHNICAL SKILLS

- Java
 - HTML, CSS, JavaScript
- Databases - SQL, Oracle
 - Power BI
- Spring Boot
 - C#

Soft skills

- Team Work
 - Leadership
- Problem Solving
 - Critical Thinking
- Adaptability and Quickly learn
 - Time Management

ORGANIZATIONS AND EXTRACURRICULAR ACTIVITIES

Computer Society in NIBM	Member	2024 - Present
Former Member of Junior Debating team of Mahinda College Galle		2017

LANGUAGES

- English
- Sinhala
